

The water color change in the foot spa is caused by a reaction between the toxins being pulled from a user's body and particles in the water, salt added to the water, the metals in the steel rods, and the acidity or alkalinity of the user. Please note that the color produced by the aforementioned reactions will depend, to a certain extent, on the chemical impurities of the water in your geographic area.

The following color chart is based on what we believe to be represented by the water colors (the colors used in the chart below are not representative of the actual color of the water):

Color or Particle	Material or Area of the Body Being Detoxified
Black	Liver
Black Flecks	Heavy Metals
Brown	Liver, Tobacco, Cellular Debris
Dark Green	Gall Bladder
Orange	Joints
Red Flecks	Blood Clot Material
White Cheese-Like Particles	Most Likely Yeast
White Foam	Mucous from Lymph System
Yellow-Green	Kidneys, Bladder, Urinary Tract, Female/Prostate Area
